Shine your shoes in under 10 seconds!

## Our German Shoe Shine Systems

Our systems are a complete fully automatic shoe shine machine that shines your shoes in under 10 seconds. There is no need to touch or handle your shoes with your bare hands. This means there's no risk of picking up pathogenic microorganisms, no messing around with dirty wax and no need to exhaustively polish the wax off just to get the perfect shine. And best of all, it's convenient, quick, easy and it'll blend in easily with your home, office, club or hotel environment with its unique design.

### Here's how it works

1. Turn on system - contact switch or unique touch sensor to activate the induction motor (includes timer on some models).
2. Pre-clean dirt from shoe using the pre-clean brush (All models except for the Easy Comfort) are made from 100% genuine horse hair.
3. Apply Polish - Lift up to dispense liquid polish on shoe
4. Polish shoe with woollen polishing brush for that extra shine and sparkle.

If you want to present and look your best in under 10 seconds then read on to find out more about the high quality of our machine and the different models we have. Using our system, you'll increase customer satisfaction, increase staff presentation, increase confidence, increase business and feel confident in less than 10 seconds.

### Design

Our machines are designed by some of the best award winning designers in Germany so that no matter where our systems are located, it'll blend in perfectly with any environment. Designed with timeliness and usefulness in mind, it's guaranteed to provide lasting satisfaction.

### Engineering and Case

German precision engineering at its best. What can I say, it's durable with heavy solid cast aluminium in the Cosmo series to laser cut stainless steel in the Ellipse. The motors are not only powerful, but silent induction motor that has been set at the optimum RPM to provide the unique shine that only our machine can provide.

### Brushes

The pre-clean brushes are made from 100% unique horse hair that's gentle on soft leather, yet provides enough hardness to remove stubborn dirt prior to polishing. On top of that our polishing brushes are made from 100% soft wool to give your shoes the final shine and that extra sparkle. There's a dark woollen brush for dark coloured shoes and a light woollen brush for light coloured shoes.

### Sensor

Machines that comes with support handles has a contact switch on top of the handle that is activated only when it is pressed. Machines without handles uses a unique touch sensor that automatically turns itself on when the hand or shoe nears close to 5mm of the sensor. This ingenious sensor has no gaps and eliminates one of the major problems with traditional switches. That is, dirt being caught in-between traditional switches making them less reliable. All our machines fitted with a touch sensor also has a built-in timer that automatically turns off the motor after a short period of time reducing electricity costs.

## Ellipse

With its extravagant and eye-catching form the Ellipse turns into a design highlight in your entry area.

Two different versions of the Ellipse turn the shoe polishing into something extraordinary. The results of both machines, whether it has a polish dispenser or not, will be: quick, precise, satisfying and most of all shining – just like the high-quality brushed stainless steel surface of this design highlight presents itself.

## Easy Comfort

Easy Comfort brings professional shoe shine service into every home. Small, light and user friendly the Easy Comfort finds a place in every nook and cranny.

Thus there are no excuses for dirty shoes any longer. Two polishing and a nylon pre-cleaning brush provide a quick and efficient cleaning and polishing of any shoe.

## Cosmo plus

The Cosmo plus is an enhanced version of the Cosmo series.

The additional bar made from highly polished stainless steel make the Cosmo plus look even more aesthetic than the smaller Cosmo version. The modified design changes the function: an ergonomic contact button integrated in the bar starts the machine for as long as the user pushes it down. Moreover, the handle bar provides a secure hold while using the machine and prevents that nearby walls getting stained from users touching it while balancing on one foot.

## Cosmo

The Cosmo series has convincing style, functionality and compactness.

It adapts well to personal furnishing styles and ideas, because Cosmo is available in numerous standard colors. With pre-cleaning brushes made from horse hair, it's truly unique. Thus the elegant shoe shine machine becomes an individual companion, which integrates perfectly into your existing ambience. Perfect for office, hotel or home.
